

DIGITAL LITERACY

PROJECT REPORT

Name: Anushika Sharma

Reg No: [25BAI11362]

Branch: B-Tech (AI ML)

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

last Date: [31/03/26]

Introduction

This project is based on the role of a Student Digital Ambassador, focusing on developing digital literacy skills essential for academic and professional growth. In today's digital world, it is important to understand how to use technology effectively, communicate professionally, and stay safe online.

The project includes five tasks that cover various aspects such as creating digital content, building an online presence, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime awareness. Each task helped in gaining practical knowledge and improving digital skills. This project provides a strong foundation for responsible and effective use of digital tools.

Task 1: Digital Literacy Infographic

For this task, I created a Digital Literacy Awareness infographic using Canva. The infographic highlights important concepts such as the meaning of digital literacy, safe internet practices, useful digital tools, and professional online presence.

The design includes simple and clear sections explaining how students can use digital tools effectively while staying safe online. It also emphasizes the importance of email etiquette and maintaining a professional digital identity.

While creating the infographic, I found it interesting to present information visually in a structured and attractive manner. The most challenging part was selecting relevant content and fitting it into a single page without making it look crowded. This task helped me understand how visual communication plays an important role in spreading awareness.

Task 2: Digital Portfolio (150–200 words)

In this task, I created my digital portfolio by setting up profiles on GitHub, LinkedIn, and Kaggle. These platforms are important for building a professional online presence. GitHub is used to showcase projects and coding work, LinkedIn helps in networking with professionals, and Kaggle is useful for practicing data-related skills.

I updated my GitHub profile by adding a README file with my details and learning goals. On LinkedIn, I completed my education section by adding my degree and institution.

In the coming years, I plan to actively use these platforms to improve my skills, share my work, and explore internship opportunities. This task helped me understand the importance of maintaining a professional digital identity and how it can benefit my career.

Task 3: Coding & Collaboration Platforms (150–200 words)

In this task, I explored coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level problem called “Solve Me First.” This helped me understand basic programming logic and problem-solving techniques.

I also created a Google Form titled “Digital Literacy Awareness Quiz,” which included five questions related to digital safety and tools. The form contained both multiple-choice and short-answer questions. I also viewed responses using Google Sheets.

This task was very useful as it introduced me to practical tools used in academics. Coding platforms help in improving logical thinking, while Google Forms can be used for surveys and data collection. These tools will be beneficial for my academic projects and future learning.

Task 4: Email Etiquette & Communication (100–150 words)

This task focused on professional communication through emails and responsible social media usage. I wrote two formal emails: one requesting an assignment deadline extension and another expressing interest in a summer internship. Both emails followed proper structure, including subject line, greeting, body, and closing.

I also created a checklist of social media Do’s and Don’ts to promote responsible online behavior.

Poor digital communication can lead to misunderstandings. For example, sending an email without proper structure or tone may result in it being ignored. This can be avoided by using clear language, proper formatting, and polite communication. This task helped me understand the importance of professionalism in digital communication.

Task 5: Cybercrime Awareness (100–150 words)

In this task, I studied cybercrime, focusing on UPI fraud. I learned how attackers trick users into sharing sensitive information such as OTPs or approving fake payment requests. These scams often target unaware users and can lead to financial loss.

I also created a prevention checklist that includes safety tips like not sharing OTPs, verifying payment requests, and using secure applications.

What surprised me most was how easily people fall victim to such scams. As a result, I will be more careful while making online transactions and ensure that I follow proper safety measures. This task increased my awareness about online threats and the importance of staying alert.

Conclusion

This project provided valuable insights into digital literacy and its importance in everyday life. I learned how to use various digital tools, create professional profiles, communicate effectively, and stay safe online. Each task contributed to improving my technical and communication skills.

Overall, this project helped me become more confident in using digital platforms and understanding online responsibilities. The knowledge gained from this project will be useful in my academic journey and future career.
