

Task 2

In this task, I created my digital portfolio by setting up profiles on platforms such as GitHub, LinkedIn, and Kaggle. This experience helped me understand the importance of maintaining a professional online presence in today's digital world. I learned how these platforms are used to showcase skills, connect with professionals, and explore academic and career opportunities.

While creating my profiles, I found it interesting to organize my academic information and think about my future goals. The process also made me realize that even as a first-year student, it is important to start building a digital identity early. One challenge I faced was understanding how to properly structure my GitHub profile and what information to include, but it became easier with practice.

Overall, this task was very useful as it motivated me to stay active on these platforms and continuously improve my skills. I plan to use these profiles to share my projects, learn from others, and grow professionally over the next few years.
